

Monoblock DC Inverter Air-to-Water Heat Pump

This monoblock DC inverter air-to-water heat pump efficiently transfers heat between the air and water, providing heating and cooling. Its inverter technology allows for variable speed operation, optimizing energy consumption and maintaining consistent temperatures.

Product Overview

Efficient Climate Control Solution

This monoblock DC inverter air-to-water heat pump provides a versatile solution for both heating and cooling requirements. Utilizing advanced inverter technology, the unit adjusts its operation speed to optimize energy consumption while ensuring consistent temperature maintenance. Its integrated monoblock design combines all components into a single unit, significantly simplifying the installation process and reducing the required footprint for both residential and commercial setups.

Technical Specifications

Core Functions

Heating • Cooling

Technology	DC Inverter
Design	Monoblock (Integrated unit)
Suitable Applications	Residential, Commercial
