

Motion Activated Sound Module

This motion activated sound module is designed for applications requiring sound playback triggered by motion. It includes a motion sensor, recordable voice chip, 8Ω 0.5W speaker, and battery compartment.

Overview

Motion-Activated Audio Solution

This motion-activated sound module is a versatile component designed for interactive displays, promotional signage, and retail environments. It automatically triggers pre-recorded audio messages upon detecting movement, making it an effective tool for capturing customer attention. The system is self-contained, featuring a built-in motion sensor, a high-quality metal speaker, and a convenient battery-powered design for easy installation.

Technical Specifications

Speaker Rating

8 Ω

Impedance

0.5 W

Power

Recording Duration	30s, 60s
Sampling Rate	16 kHz
Speaker Diameter	57 mm

Power & Operation

Activation

Motion Activated

Power Supply

3x AA Batteries

Applications

Common Applications

- POP Displays
- Promotional Store Signage
- Interactive Toys
- Security Alerts
