

Motion Sensor LED Tube Light

This LED tube features a built-in motion sensor for energy-efficient operation. The tube operates at 20% power until motion is detected, at which point it switches to 100% power.

Overview

Smart Motion-Sensing Illumination

This advanced LED tube light is designed as a direct, energy-efficient replacement for traditional fluorescent lamps. It eliminates common issues such as flickering at low voltages, slow startup times, and the premature blackening of lamp ends. Featuring an intelligent motion sensor, this light optimizes power consumption by automatically adjusting brightness based on occupancy, making it an ideal choice for energy-conscious environments.

Performance

Energy Saving Mode

20 % Standby Power	100 % Active Power	12 s Delay Time
------------------------------	------------------------------	---------------------------

Key Features

Core Advantages

- Eliminates flickering at low voltage
- Prevents blackening at tube ends
- Extended operational lifespan
- Integrated motion sensor technology
- Energy-efficient power management

Best For

Residential, Energy Saving, Retrofit
