

# Motor Grader with All-Wheel Drive

This motor grader is designed for precision grading and leveling tasks on construction sites. It features all-wheel drive for enhanced traction and stability.

## Overview

### Precision Grading Performance

This robust construction machine is engineered for precision grading and leveling tasks across demanding environments. Featuring all-wheel drive, it provides superior traction and stability on diverse terrains. The unit is equipped with hydraulic controls for accurate blade positioning and an enclosed cabin designed for operator comfort and safety.

## Key Features

Steering System	Articulated steering
Drivetrain	All-wheel drive with tandem rear axles
Versatility	Moldboard included, Optional attachments available

## Operator Environment

### Operator Benefits

- Enhanced comfort
- Improved safety
- Hydraulic blade control

Cabin	Enclosed cabin
