

# Motor Segment Magnet

Sintered NdFeB magnets designed for motor applications. These magnets offer excellent temperature performance and are manufactured under the IATF16949 quality control system.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Motor Segment Magnets

These sintered NdFeB magnets are engineered specifically for high-efficiency electric motor applications. Designed to provide optimal magnetic flux, they ensure consistent performance and reliable rotor movement in demanding industrial, automotive, and consumer electronics environments. With an IATF16949 quality control standard, these components offer superior resistance to demagnetization and corrosion for long-lasting operational stability.

## Technical Details

Material Type	Sintered NdFeB (Neodymium Iron Boron)
Quality Certifications	IATF16949

## Performance

### Thermal Stability

High Temperature Resistance

### Core Advantages

- Optimized magnetic flux generation
- High resistance to demagnetization
- Excellent corrosion resistance
- Precision-machined surface finish

## Applications

### Suitable Industries

- Automotive
- Industrial Machinery
- Consumer Electronics
