

Motorcycle ABS Sensor Cable Assembly

This motorcycle part is an ABS sensor cable assembly. It is designed to transmit wheel speed data to the ABS control unit, enabling the system to prevent wheel lockup during braking.

Product Overview

ABS Sensor Cable Assembly Overview

This motorcycle ABS sensor cable assembly is engineered to ensure seamless communication between wheel speed sensors and the ABS control unit. Designed for durability and precise data transmission, the assembly features protective sheathing and specialized connectors to prevent wheel lockup during braking. It is an essential component for maintaining reliable anti-lock braking system performance in motorcycle applications.

Technical Specifications

Assembly Components

- Multi-core black cabling
- Protective cable sheathing
- ABS control unit interface connectors
- Wheel speed sensor connectors
- Integrated mounting grommets

Design Features

Protective Sheathing • OEM-Style Connectors • High-Reliability Wiring

Application

Motorcycle ABS System, Wheel Speed Sensing, Braking Safety System
