Product Overview

High-Performance Motorcycle Bearings

These motorcycle ball bearings are engineered to deliver optimal performance and durability in demanding riding conditions. Manufactured to meet international quality standards, they ensure smooth operation and reduced friction within motorcycle engines and driveline systems. Designed as genuine replacement parts, these bearings provide reliability and consistent efficiency for a wide range of motorcycle models.

Technical Specifications

Component Type	Ball Bearing (Bantalan Bola)
Application	Motorcycle Spare Parts
Model Reference	6301 2RS

Quality & Compliance

Key Features

High-Standard Material • Environmental Protection • Genuine Parts

Certifications	ISO 9001
