

Motorcycle Brake Hub

Motorcycle brake hubs connect the wheel to the braking system. These components are essential for effective and reliable braking performance on motorcycles.

Product Overview

High-Performance Motorcycle Brake Hubs

These motorcycle brake hubs are engineered for durability and reliable braking performance, specifically designed for small displacement motorcycles and dirt bikes. Crafted from high-quality cast aluminum, these components offer an optimal balance of strength and lightweight construction. The collection features versatile designs compatible with various mounting patterns and brake actuator mechanisms, ensuring broad application suitability.

Technical Specifications

Brake System Compatibility

- Drum Brake
- Disc Brake

Configuration Options

Multiple Mounting Patterns • Various Actuator Mechanisms

Material	Cast Aluminum
Primary Application	Dirt Bikes, Small Displacement Motorcycles
