

Motorcycle Brake Shoe Assembly

This motorcycle brake shoe assembly is essential for drum brake systems. It features a robust metal construction with friction material bonded to the outer surface for effective braking.

Product Overview

High-Performance Brake Shoe Assembly

This motorcycle brake shoe assembly is engineered for drum brake systems, ensuring reliable and consistent stopping power. Constructed with a robust metal core and high-grade friction material, it is designed for durability and effective heat dissipation. The assembly includes essential retraction springs to maintain optimal performance and safety in various riding conditions.

Technical Specifications

Included Components

- Brake Shoe Pair
- Retraction Springs

Model Code	JH125
Brake System Type	Drum Brake
Material Composition	Metal Base, Bonded Friction Material

Performance Features

Key Benefits

Reliable Stopping Power • Durable Construction • Consistent Performance
