

# Motorcycle Control Cable

This motorcycle inner cable is constructed from galvanized steel strands for strength and corrosion resistance. It is suitable for throttle, brake, and clutch control systems.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Control Solutions

These motorcycle inner cables are precision-engineered to provide optimal performance and durability across various control systems, including throttle, brake, and clutch applications. Constructed from high-strength galvanized steel strands, they offer superior corrosion resistance and smooth, responsive operation. Designed for reliability, each cable features swaged metal end terminals to ensure secure attachments and long-term service life.

## Technical Specifications

### Compatible Systems

- Throttle
- Brake
- Clutch

### Material Construction

Galvanized steel strands

### Key Features

Corrosion Resistant, High Strength, Smooth Operation, Swaged Metal Ends

## Market Availability

### Primary Export Markets

Colombia • Peru • Brazil • Argentina • Bolivia • Guatemala • Uruguay • Paraguay • India • Bangladesh • Algeria
