

Motorcycle Control Cables

Motorcycle control cables are designed for various functions, including clutch, throttle, and brake operation. These cables feature durable outer housings and flexible inner wires for smooth and reliable performance.

Product Overview

High-Performance Motorcycle Control Cables

These motorcycle control cables are engineered for precision and reliability, serving as essential components for clutch, throttle, and brake systems. Featuring durable outer housings and flexible inner wires, they ensure smooth operation and consistent responsiveness under various riding conditions. Designed to accommodate a wide range of motorcycle models, these cables provide the necessary control for safe and efficient vehicle performance.

Technical Specifications

Available Cable Types

- Clutch Cables
- Throttle Cables
- Brake Cables

Inventory Details

Component Type	Application
CG100 Clutch Cable	Clutch Operation
CG100 Throttle Cable	Throttle Control
CG100 Brake Cable	Braking System

Compatibility

Compatibility Tags	CG100, Universal Fit
