

Motorcycle Cylinder Head Assembly

This complete cylinder head assembly is designed for small gasoline engines used in motorcycles and ATVs. It features valve seats, valve guides, a spark plug port, and intake/exhaust ports.

Product Overview

High-Performance Cylinder Head Assembly

This complete cylinder head assembly is expertly engineered for small gasoline engines, making it an ideal replacement component for motorcycles, ATVs, and portable generators. Constructed from high-grade cast aluminum alloy, the unit ensures superior heat dissipation and long-term durability under demanding operating conditions. Precision-machined for optimal compression and performance, this assembly comes fully equipped with essential valve train components for seamless installation.

Technical Specifications

Included Components

- Valve seats
- Valve guides
- Spark plug port
- Intake port
- Exhaust port
- Complete valve train

Compatible Engine Series

168F Engine Series

Material Construction

Cast Aluminum Alloy

Quality & Standards

Key Performance Indicators

1 High

Heat Dissipation Efficiency

1 Optimal

Compression Precision

Primary Applications

Motorcycle, ATV, Generator
