

Motorcycle Cylinder Head

This cylinder head is designed for motorcycle engines, accommodating multiple valves. It is constructed from cast aluminum and includes ports for coolant and oil circulation.

Overview

High-Performance Engine Component

This motorcycle cylinder head is precision-engineered to facilitate optimal engine performance. Constructed from durable cast aluminum, it features complex internal architecture including dedicated passages for coolant and oil circulation, alongside intake and exhaust ports. Designed for multi-cylinder configurations, this component provides the essential mounting points and structural integrity required for reliable engine operation.

Technical Specifications

Key Features

- Integrated coolant circulation passages
- Dedicated oil circulation channels
- Multi-valve guide configuration
- Precision-machined mounting points
- Optimized intake and exhaust ports

Material	Cast Aluminum
Engine Compatibility	Multi-cylinder engines, Motorcycle

Condition

Condition Status

Pre-owned • Inspected
