

Motorcycle Electrical Power Generator Stator

This motorcycle stator generates electrical power for the motorcycle's electrical system. It is essential for charging the battery and powering various electrical components.

Product Overview

High-Performance Motorcycle Stator

This motorcycle stator is engineered to provide reliable electrical power generation for your vehicle's charging system. Featuring precision-wound copper coils on a circular core, it ensures consistent energy output to maintain battery charge and power essential electrical components. Designed for durability and efficient performance, this unit is a critical replacement part for maintaining optimal motorcycle electrical health.

Technical Specifications

Wiring Configuration

- Multi-strand copper windings
- Black protective sleeve
- Integrated electrical connectors
- Color-coded wiring (Black, Blue, Yellow)

Component Type	Electrical Power Generator Stator
Primary Function	Battery Charging, Electrical System Power, Replacement Part
