

Motorcycle Engine Air Intake Duct

Molded air intake ducts and connectors are designed for motorcycle engines. These components ensure efficient air delivery to the engine's intake system.

Product Overview

High-Performance Air Intake Components

These motorcycle engine air intake ducts are precision-engineered to ensure optimal airflow to your engine's combustion system. Featuring a robust construction of high-quality rubber and plastic, these components combine corrugated sections for necessary flexibility with smooth-bore areas to maximize intake efficiency. Designed to accommodate various engine configurations, these ducts are essential for maintaining consistent performance and engine health.

Technical Details

Design Features

- Corrugated sections for vibration absorption and flexibility
- Smooth interior sections for laminar airflow
- Molded construction for precise fitment

Application

Motorcycle Engine Intake • Air Induction System

Material

Rubber, Plastic

Compatibility

Available in various sizes and shapes to suit different engine configurations.
