

Motorcycle Engine Cylinder Block

This motorcycle engine cylinder block features a cylindrical bore where the piston reciprocates. Cooling fins dissipate heat generated during combustion, and mounting points allow for cylinder head and component attachment.

Product Overview

High-Performance Cylinder Block

This motorcycle engine cylinder block is engineered for durability and reliable thermal management. Featuring a precision-machined cylindrical bore, it provides an optimal surface for piston reciprocation and combustion efficiency. The integrated cooling fins are designed to effectively dissipate heat, ensuring consistent engine performance under various operating conditions.

Technical Details

Model ID

SC-X

Material

Cast aluminum or iron

Features

Key Features

- Precision cylindrical bore
- Integrated cooling fins
- Wear-resistant cylinder liner
- Standardized mounting points for cylinder head
- Dedicated intake and exhaust ports

Performance Benefits

Heat Dissipation, Efficient Combustion, Wear Resistance, Reliable Performance
