

Motorcycle Engine Cylinder Block

This motorcycle cylinder block is made using double metals casting that contain boron under the national standard of GB/T1150-1993. Germany equipment ensures the grinding distributes regularly for equal oil film distribution and fine reciprocation.

Product Overview

High-Performance Engine Component

This high-performance motorcycle cylinder block is engineered for optimal heat dissipation and superior engine efficiency. Constructed from durable, high-quality materials, it is designed to withstand demanding conditions while ensuring extended engine life. With precise bore dimensions and robust mounting points, this component provides a reliable and secure fit for various engine models.

Technical Specifications

Compatibility & Fit

- Precision bore dimensions
- Optimal piston fit
- Robust mounting points
- Various engine configurations

Material Quality

Wear Resistant • Durable Construction • High-Quality Alloy

Thermal Management

Cooling Fins, Heat Dissipation, Thermal Efficiency
