

# Motorcycle Engine Spark Plug

This spark plug features a multi-ribbed insulator to eliminate flashover. It is constructed with a 95% pure alumina insulator.

## Product Overview

### High-Performance Ignition Solution

This motorcycle engine spark plug is engineered for superior durability and reliable ignition performance. Utilizing a 95% pure alumina insulator and a copper core electrode, it offers excellent heat and electrical conductivity while resisting oxidation and corrosion. Designed with advanced sealing technologies, it ensures an air-tight fit and long service life for demanding engine environments.

## Technical Specifications

Insulator Material	95% Pure Alumina
Electrode Core	Copper
Housing Finish	Nickel Plated

## Key Features

### Performance Features

- Multi-ribbed insulator eliminates flashover
- Strong resistance to heat and shock
- Superior insulation properties
- Heat crimping process for air-tight fit
- Inner conductive glass seal
- Reliable multi-layer gaskets

### Durability Characteristics

Corrosion Resistant, Oxidation Resistant, Heat Resistant, Shock Resistant

## Identification

### Model Code

D3RTC
