

Motorcycle Frame for Small Displacement Bikes

This motorcycle frame is designed for small displacement motorcycles or minibikes. It features a central spine design with mounting points for the engine, suspension, and accessories.

Product Overview

Compact Motorcycle Chassis

This tubular steel motorcycle frame is engineered specifically for small displacement motorcycles and minibikes. Its central spine design provides a lightweight yet rigid structure, optimizing the bike for agility and compact dimensions. Designed with integrated mounting points for engines, suspension, and bodywork, it serves as a versatile foundation for custom builds or replacement projects.
