

# Motorcycle Front Brake Hub Assembly

This motorcycle front brake hub assembly is constructed from cast aluminum and includes an integrated brake lever mechanism. It is designed for drum brake systems, providing reliable stopping power through a brake cam and lever that actuates the brake shoes.

## Product Overview

### High-Performance Front Brake Hub

This front brake hub assembly is engineered for durability and consistent stopping power in drum brake systems. Constructed from robust cast aluminum, it features an integrated brake lever mechanism and precise mounting points for spokes. This assembly ensures smooth, controlled braking performance, making it a reliable choice for motorcycle maintenance and repair.

## Technical Specifications

Material	Cast Aluminum
Brake System Compatibility	Drum Brake
Compatible Models	DY100

## Key Features

### Included Components

- Brake cam
- Brake lever mechanism
- Integrated spoke mounting points
