

Motorcycle Front Shock Absorber Assembly

Motorcycle front shock absorber assembly featuring dual telescopic forks. The assembly provides damping and suspension for motorcycle front wheels.

Overview

High-Performance Front Suspension

This motorcycle front shock absorber assembly is engineered to provide superior damping and suspension stability for front wheels. The unit features a robust dual telescopic fork design, connected by a central yoke and steering stem for precise handling. Designed for durability and performance, the assembly includes protective covers on the lower fork sections to shield against road debris and environmental factors.

Technical Specifications

Assembly Components

- Upper tubes
- Lower tubes
- Central yoke
- Steering stem
- Wheel axle mounting points
- Braking system mounts

Protection

Dust resistant • Black protective covers

Design Type

Dual telescopic fork

Key Features

Telescopic, Damping System, Protective Covers
