

Motorcycle Front Suspension System

This motorcycle front suspension system is designed for enhanced handling and stability. It provides superior damping and control for a smoother riding experience.

Overview

High-Performance Front Suspension System

This motorcycle front suspension system is engineered for superior handling and stability, providing a smoother and more controlled riding experience. The complete assembly includes a high-performance cartridge fork kit, fork tubes, sliders, and covers, designed for durability and reliability. With adjustable spring pre-load and customizable spring rates, this system allows riders to fine-tune their suspension to match specific riding conditions and personal preferences.

Kit Components

Included Components

- Cartridge Fork Kit (Cartridges, Fork Bolts, Main Springs, Oil Seals)
- Fork Tube
- Fork Slider
- Fork Slider Cover

Performance Features

Key Performance Features

Adjustable Spring Pre-load, High Standard Oil Seals, Customizable Spring Rate

Manufacturing & Materials

Manufacturing Methods

Component	Process	Surface Treatment
Fork Slider (Casting)	Casting	Chrome, Powder Coated
Fork Slider (Forging)	Forging	Anodizing
