

Motorcycle Handlebar Switch Assemblies

These handlebar switch assemblies are designed for motorcycles. They allow riders to control essential functions such as lights, signals, and engine start/stop.

Product Overview

Versatile Handlebar Control Solution

These motorcycle handlebar switch assemblies are precision-engineered components designed to manage critical motorcycle functions with ease. Featuring a robust design with integrated wiring harnesses, these units provide reliable control for lighting, turn signals, and engine ignition systems. Ideal for maintenance or customization projects, these assemblies ensure seamless operation and durability for various motorcycle models.

Technical Specifications

Key Control Functions

- Headlight Control
- Turn Signal Activation
- Engine Start/Stop
- Horn Control

Model Identifier	AM-HD-067
Component Type	Handlebar Switch Assembly
Connection Type	Wiring harness with standard white connectors
Design Features	Ergonomic Design, Integrated Wiring, High-Visibility Controls
