

Motorcycle Hydraulic Brake Component

This motorcycle part is a hydraulic component for brake systems, possibly a master cylinder or distribution block. It has a cast metal body with ports for fluid lines and reservoirs for brake fluid.

Product Overview

High-Performance Hydraulic Brake Component

This hydraulic brake component is engineered for reliable fluid management in motorcycle braking systems. Featuring a durable cast metal body and dual reservoir design, it provides consistent pressure distribution for enhanced stopping power. Its robust construction and integrated mounting flange ensure secure installation and long-term performance in demanding riding conditions.

Technical Specifications

Construction Material	Cast metal body
Component Type	Hydraulic master cylinder / distribution block
Reservoir Count	2
Reservoir Material	White plastic with metal retaining clips
Mounting Type	Integrated mounting flange, Multi-port fluid lines
