

Motorcycle Ignition Control Module CDI

This motorcycle ignition control module, likely a Capacitive Discharge Ignition (CDI) unit, controls spark timing and delivery. It ensures proper combustion for efficient starting and running of the engine.

Product Overview

High-Performance Ignition Control

This Capacitive Discharge Ignition (CDI) unit is engineered for small displacement motorcycles, specifically compatible with the CG125 engine platform. It serves as the critical component for managing spark timing and delivery, ensuring efficient combustion and reliable engine starting. Built with a durable housing, this module is designed to withstand the rigorous demands of daily motorcycle operation.

Technical Specifications

Design Features

- Durable black rectangular casing
- Multi-pin electrical connector
- Optimized for reliable spark timing

Compatible Model	CG125
Component Type	Capacitive Discharge Ignition (CDI)
Application	Motorcycle, Small Displacement Engine
