

Motorcycle O-Ring Drive Chain

This high-performance motorcycle O-ring chain ensures durability and smooth power transmission. It features alloy steel construction, precision engineering, and O-ring seals that retain lubrication and prevent dirt ingress, which extends the chain's life.

Product Overview

High-Performance Drive Chain

This motorcycle O-ring chain is engineered for durability and reliable power transmission. Constructed from high-quality alloy steel, it features precision engineering to ensure optimal performance. The integrated O-ring seals are designed to retain lubrication and prevent dirt ingress, significantly extending the service life of the chain for various motorcycle models.

Technical Specifications

Key Features

- O-ring seal design for lubrication retention
- Dirt and debris ingress prevention
- High-durability alloy steel construction
- Precision engineering

Chain Type	O-Ring
Material	Alloy Steel
Model Designation	520HO, 520H
