

Motorcycle Part Cleaning and Coating System

This system is designed for cleaning and coating motorcycle parts. It utilizes tanks and pressurized systems for effective surface treatment.

辉光离子氮化生产线

Overview

Advanced Surface Treatment Solution

This industrial-grade system is engineered for the precise cleaning and coating of motorcycle components. Utilizing advanced glow ion nitriding technology, the equipment ensures high-quality surface finishing, enhancing the durability and performance of treated parts. Its robust dual-tank design allows for efficient, continuous processing in demanding manufacturing environments.

Technical Specifications

Primary Applications

- Motorcycle part cleaning
- Surface coating
- Industrial surface treatment

Key Features

High Pressure Capability • Integrated Pumping System • Modular Piping

Process Technology

Glow Ion Nitriding

System Configuration

Dual-Tank System, Industrial Processing, Surface Treatment
