

Motorcycle Rear Drive Sprocket

This motorcycle rear sprocket transmits power from the engine to the rear wheel. It features multiple mounting holes and teeth for engaging with a chain.

Product Overview

High-Performance Rear Drive Sprocket

This premium motorcycle rear drive sprocket is engineered for durability and efficient power transmission. Crafted from high-grade stainless steel, it is designed to withstand the rigors of the drivetrain, ensuring reliable performance under various riding conditions. Its precision-cut teeth provide optimal engagement with the drive chain, making it an essential component for motorcycle maintenance and drivetrain upgrades.

Technical Specifications

Key Features

- High-strength stainless steel construction
- Precision-engineered teeth for chain engagement
- Standard mounting hole configuration
- Durable finish for long service life

Material	Stainless Steel
Component Type	Rear Drive Sprocket
Application	Motorcycle Drivetrain, Power Transmission
