

Motorcycle Rim Butt Welding Machine

This specialized machine joins motorcycle rims using a butt-welding process. Engineered for precision and efficiency, it ensures strong, seamless welds.

Product Overview

Professional Rim Welding Solution

The ZXH1B is a specialized butt-welding machine engineered specifically for the manufacturing of motorcycle rims. It combines a robust structural frame with precise control systems to deliver seamless, high-strength welds. Designed for both efficiency and ease of use, this equipment integrates advanced automation to optimize welding parameters across various rim sizes and materials, ultimately increasing factory throughput.

Operational Capabilities

Process Type	Butt-welding
Automation	Automated Welding, Parameter Optimization

Key Features

Product Highlights

- Robust frame construction for long-term durability
- Advanced control system for consistent weld quality
- Versatile parameter settings for multiple rim specifications
- Reduced manual labor requirements
- Simplified maintenance protocols
