

Motorcycle Stator and Flywheel Kit

This kit includes a motorcycle stator and flywheel, essential components for the charging system. The stator is a multi-coil electrical generator that produces AC voltage, which is then rectified to charge the battery and power the electrical system.

Product Overview

Essential Charging System Components

This comprehensive kit includes both a motorcycle stator and a flywheel, serving as the core components of the vehicle's charging system. The stator functions as a multi-coil electrical generator that produces AC voltage, while the flywheel (or rotor) utilizes magnets to induce this voltage as it rotates. Designed for specific motorcycle models, this kit ensures reliable performance and seamless integration with your bike's electrical architecture.

Technical Specifications

Included Components

- Motorcycle Stator
- Flywheel (Rotor)

Compatibility

Model Specific • Verify Before Purchase

Primary Function

Charging system power generation
