

# Motorcycle Steering Knuckles

Pair of cast metal steering knuckles designed for motorcycle steering. Each knuckle features a cylindrical shaft with a yoke-shaped upper section with mounting points.

## Product Overview

### High-Precision Steering Components

These cast metal steering knuckles are designed for motorcycle or similar light vehicle steering systems. The assembly features a robust yoke-shaped upper section paired with a durable cylindrical shaft to ensure structural integrity. Each component is provided with a protective finish, making them ideal for assembly into high-performance suspension and steering configurations.

## Technical Specifications

### Key Features

- Yoke-shaped mounting head
- Cylindrical integrated shaft
- Threaded termination
- Precision-engineered yoke geometry

<b>Material Composition</b>	Cast Metal
<b>Application</b>	Motorcycle, Vehicle Steering, Suspension Components
