

Motorcycle Transmission Gear Shaft Assembly

This assembly features precision-engineered gear shafts designed for motorcycle transmissions. The shafts are constructed from high-strength steel for durability and resistance to wear.

Product Overview

Precision Transmission Component

This motorcycle transmission gear shaft assembly is engineered for durability and reliable power transfer. Constructed from high-strength steel, the assembly is designed to withstand rigorous operational demands while ensuring smooth gear changes. With meticulously machined gear teeth and splined shafts for secure integration, this component is essential for maintaining optimal transmission performance.

Technical Specifications

Key Design Features

- Precision-machined gear teeth
- Splined shaft design
- Multi-gear configuration

Material	High-strength steel
Quality Standards	Precision Engineered, Wear Resistant

Performance Metrics

Performance Highlights

1 High

Power Transfer Efficiency

1 High

Wear Resistance
