

Mould Design Service

Service provides detailed architectural blueprints for mould creation. Design incorporates precise dimensions and digital components for manufacturing.

Service Overview

Comprehensive Mould Design Management

This service provides an end-to-end digital platform for managing the entire mould design process. By integrating industrial internet resources, it facilitates seamless interaction, order management, and project tracking across geographical boundaries. The platform connects design needs with expert resources, ensuring efficient workflow while fostering technology exchange through expert guidance.

Service Features

Key Platform Capabilities

- Interactive project flow management
- Digital order and payment processing
- Real-time design progress tracking
- Remote design auditing
- Integrated communication tools

Access Method

Mobile App • Web Platform

Service Benefits

Operational Advantages

| Benefit Category | Description |
|------------------|--|
| Efficiency | Resolves design task accumulation |
| Collaboration | Expert online guidance and tech exchange |
| Management | Real-time audit and status updates |
