

Moulds for Fan Parts and Drinking Fountain Components

These moulds are used in the manufacturing of fan parts and drinking fountain components. They are essential for mass-producing consistent and high-quality plastic parts for various industrial and consumer applications.

Overview

Precision Industrial Moulding Solutions

This collection of high-precision moulds is engineered for the mass production of fan components and drinking fountain parts. Each mould is crafted to ensure consistent geometry and high-quality output for industrial and consumer applications. These tooling solutions are designed to streamline manufacturing processes for fan housings, blades, and water dispenser assemblies.

Mould Inventory

Available Mould Units

- Fan Mould #486
- Fan Mould #485
- Fan Mould #484
- Fan Mould #483
- Fan Mould #482
- Drinking Fountain Mould #479

Application Details

Produced Components

Fan Blades • Fan Housings • Drinking Fountain Components

Primary Applications

Fan Manufacturing, Consumer Appliances, Water Dispensing Systems, Industrial Plastic Parts
