

Mountain Terrain Rock Drilling Machine

This rock drilling machine is designed for efficient and powerful operations in mountainous terrains. It is suitable for road construction and pavement maintenance, specifically in road basis construction.

Product Overview

High-Performance Mountain Drilling

This heavy-duty rock drilling machine is specifically engineered for high-mountain terrain and challenging environments. It provides powerful, efficient drilling capabilities essential for road basis construction, pavement maintenance, and rock splitting operations. Designed for durability and precise control, this equipment ensures reliable performance even under the most demanding site conditions.

Key Features

Performance Highlights

1 Fast

Drilling Speed

1 Ample

Power Rating

Primary Applications

Road Construction, Pavement Maintenance, Rock Splitting, Mountain Terrain Operations, Road Basis Construction

Technical Capabilities

Core Functions

- Robust rock drilling
- Efficient rock splitting
- High-torque operation for hard formations
- Precision hole creation

Design Advantages

Multifunctional • Rugged Construction • Ergonomic Design • High Durability
