Product Overview

High-Performance Axial Ventilation

The Movable Axial Air Blower is a professional-grade ventilation solution engineered for demanding industrial environments. Featuring a robust pure copper motor, it ensures long service life and high-pressure airflow suitable for long-distance ducting. With an adjustable blade angle and integrated wheels, this unit offers maximum flexibility and performance for underground projects, tunnels, and telecommunications maintenance.

Technical Specifications

Motor Type	Pure Copper Motor
Mobility	Wheeled Base, Portable, Movable Operation
Airflow Control	Angle-adjustable blade

Applications

Ideal Environments

- Underground construction
- Telecommunications maintenance
- Tunnel repair projects
- Factories and warehouses

Safety & Design

Key Design Features

High Pressure • Long Distance Ducting Support • Protective Guard
