

Movable Belt Conveyor

This movable belt conveyor is suitable for various locations such as construction sites, mines, and factories. It is designed for short-distance transport, loading, and unloading of loose materials.

Product Overview

Versatile Material Handling Solution

This DY series movable belt conveyor is an ideal solution for short-distance transport, loading, and unloading of loose or packaged materials. Designed with a lightweight yet robust steel structure, it offers excellent mobility and is well-suited for dynamic working environments such as construction sites, warehouses, and shipping terminals. The system is engineered to function reliably as a standalone unit or as part of a multi-conveyor automated workflow.

Technical Specifications

Maximum Material Bulk Density	1.67 t/m ³
Maximum Material Temperature	60 °C
Available Belt Materials	Rubber, Silicone, PVC, PU

Design & Features

Mobility Options

- Pneumatic tires
- Steel wheels

Drive System

Electric drum motor or belt-driven drive assembly

Applications

Suitable Industries

Construction • Mining • Warehousing • Agriculture • Coal Industry
