

Moving Wheel Head Surface Grinder

This surface grinding machine features a moving wheel head for accurate material removal and finishing. It is designed for high precision grinding operations on various materials.

Overview

High-Precision Surface Grinding Solution

This Moving Wheel Head Surface Grinder is engineered for demanding material removal and finishing tasks requiring exceptional accuracy. Designed for tool and die as well as mold-making applications, it features a robust spindle and a motorized design for stable performance. The machine incorporates an integrated coolant system and automated lubrication to ensure reliability and repeatability in high-precision machining environments.

Key Features

Operational Highlights

- Moving wheel head for enhanced grinding precision
- Programmable control system for operational efficiency
- Automatic lubrication system
- Integrated coolant system for thermal stability

Application

Suitable Industries

Tool and Die Making, Mold Making, Precision Machining
