

MP3 Audio Player with Amplifier and Alarm System

This MP3 audio player is an intelligent music system designed for versatile audio applications. It features multiple input and output options, including USB, microphone, and PC connectivity, and incorporates a rated-voltage power amplifier and alarm system for short circuits.

Product Overview

Intelligent Audio Management System

The VC-A3816 is a versatile MP3 audio player and intelligent music system designed for professional audio applications. It features robust integration capabilities, including PC connectivity for programmable scheduling and an integrated alarm system for emergency broadcasting across multiple zones. This system is ideal for installations requiring reliable, automated audio playback and zone control.

Technical Specifications

Internal Storage	8 GB
Base Recording Time	480 minutes
Power Input	AC 220V-240V, 50-60Hz

Features & Capabilities

Playback Options

- Preferred play
- Compiled play
- Random play

System Connectivity	USB, PC Connection, Microphone, Antenna
Partition Control	4
Emergency Features	Urgent alarm signal broadcast for all zones with short circuit protection
Timer Control	Yes
