

Multi-Barrel Carburetor for Internal Combustion Engines

This carburetor mixes air and fuel for an internal combustion engine. It provides the engine with the correct air-fuel mixture for efficient combustion under varying operating conditions, including starting, idling, acceleration, and high-speed running.

Product Overview

High-Performance Multi-Barrel Carburetor

This multi-barrel carburetor is designed for internal combustion engines, specifically engineered for the 22R engine model. It acts as a critical component for mixing air and fuel to ensure efficient combustion across various operating conditions, including idling, acceleration, and high-speed performance. Featuring multiple venturis and throttle valves, this unit is built to provide enhanced fuel distribution and improved engine responsiveness.

Technical Specifications

Carburetor Type

Multi-Barrel

Key Components

- Float chamber
- Jets
- Venturi
- Throttle valve
- Choke

Part Number

21100-35520

Compatible Engine Model

22R
