

Multi-Blade Air Damper

This multi-blade damper is suited for HVAC and industrial ventilation systems. It features adjustable blades within a frame and a manual actuator to control airflow.

Product Overview

High-Performance Airflow Control

This multi-blade air damper is engineered for precise airflow regulation in industrial ventilation and HVAC systems. Constructed from durable metal, it features adjustable blades that allow for effective control or complete shut-off of air within ductwork. Equipped with a manual actuator, this damper provides reliable operation for maintaining optimal system efficiency.

Technical Specifications

Design Features

- Multi-blade configuration
- Adjustable blade mechanism
- Manual control handle
- Duct-compatible frame

Construction Material	Galvanized Steel or Aluminum
Operation Method	Manual Actuator
Application	HVAC, Industrial Ventilation, Airflow Regulation
