

Multi-Blade Axial Fan for Ventilation

This multi-blade fan is designed for air movement applications, such as ventilation or cooling systems. The fan features curved blades optimized for efficient airflow and a central hub for mounting.

Product Overview

High-Efficiency Axial Ventilation Solution

This multi-blade axial fan is engineered for optimal air movement in ventilation and cooling systems. Featuring a durable, lightweight cast metal construction, it is designed for reliable performance in various household electrical appliances, including air conditioners and exhaust equipment. Its aerodynamic three-blade design ensures efficient airflow for demanding cooling applications.

Technical Specifications

Design Features

- Curved blade profile for optimized airflow
- Central hub for motor shaft mounting
- Lightweight construction
- Durable cast metal build

Number of Blades	3
Material	Cast metal (aluminum or alloy)
Common Applications	Air Conditioning, Ventilation Systems, Exhaust Equipment, Household Appliances
