

Multi-Cavity Injection Mold

This precision-engineered multi-cavity mold is designed for high cavitation molding processes. It is constructed from durable materials, ensuring consistent performance in demanding manufacturing environments and optimized material flow for high-quality parts.

Overview

Precision Multi-Cavity Injection Molding

This high-cavitation injection mold is engineered for mass production of small to medium-sized plastic components. Designed for durability and consistent performance, it features optimized internal structures for efficient cooling and material flow. The mold ensures exceptional dimensional accuracy and superior surface finish, helping to reduce cycle times in demanding manufacturing environments.

Technical Capabilities

Quality Standards

ISO 9001:2008

Suitable Applications

Automobile Parts, Semiconductor Components, IC Connectors, Electrical Connections, Motor Fixed Rotors

Manufacturing Features

Key Features

- High-cavitation design for mass production
- Intricate internal cooling structures
- Optimized material flow channels
- High dimensional accuracy
- Superior surface finish

Performance Metrics

2006 Year

Established Expertise
