

Multi-Column Steel Radiator for Heating

This multi-column steel radiator is designed for efficient heat distribution. It features a classic design with vertical columns connected by horizontal headers and is suitable for residential and commercial heating systems.

Product Overview

High-Efficiency Heating Solution

This multi-column steel radiator is engineered for optimal heat distribution in both residential and commercial environments. Its classic design features vertical columns connected by robust horizontal headers, ensuring reliable thermal performance. Constructed from durable steel, the unit offers long-lasting resistance to corrosion and wear, making it a dependable choice for modern heating systems.

Technical Specifications

Design Characteristics

- Multi-column vertical structure
- Horizontal header connection
- Classic aesthetic

Material	Durable Steel
