

Multi-Conductor Data Transmission Cable

This multi-conductor cable is designed for data transmission and signal control applications. It features a durable outer jacket, color-coded insulation, and terminated ends for reliable connectivity.

Product Overview

Reliable Data Transmission Solution

This multi-conductor data transmission cable is engineered for high-performance signal control and electronic connectivity. Featuring color-coded insulation and a durable outer jacket, it ensures organized installation and long-term protection in demanding environments. The exposed copper wiring is optimized for stable data transfer, making it an ideal choice for complex electronic systems and communication networks.

Technical Features

Conductor Material

Copper

Cable Type

Multi-Conductor Communication Cable

Insulation

Color-coded insulation for easy identification

Applications

Primary Applications

- Data transmission
- Signal control
- Electronic system connectivity

Design & Construction

Outer Jacket

Durable protective outer jacket

Termination State

Terminated end with exposed wires
