

Multi-Conductor Shielded Data Cable

This multi-conductor shielded cable is designed for data transmission. It features a braided shield for electromagnetic interference (EMI) protection and a durable outer jacket.

Overview

High-Performance Data Transmission

This multi-conductor shielded data cable is engineered for reliable signal integrity in complex electronic systems. Featuring a robust braided shield, it provides essential protection against electromagnetic interference (EMI) to ensure stable data transmission. The durable outer jacket adds a layer of resilience, making it suitable for demanding control and data applications.

Construction & Design

Shielding

Braided Shield

Key Features

Multi-conductor, EMI Protection, Durable Jacket

Applications

Primary Applications

- Data transmission
- Electronic system control
- Signal integrity applications
