

Multi-Element Outdoor TV Antenna

This multi-element outdoor TV antenna is designed for receiving terrestrial television signals. It utilizes a combination of dipole, loop, and Yagi-Uda elements to optimize signal reception across a range of frequencies.

Product Overview

High-Performance Terrestrial Signal Reception

This multi-element outdoor TV antenna is engineered to provide superior signal capture for professional-grade terrestrial television reception. Combining sophisticated dipole, loop, and Yagi-Uda design elements, the antenna ensures optimal performance across broad frequency ranges. Its robust aluminum and weather-resistant construction makes it a reliable solution for long-term outdoor installation.

Technical Specifications

Supported Bands	VHF, UHF
Impedance Matching	Balun transformer

Construction

Material Composition

- Aluminum tubing
- Plastic insulators

Mounting Method	Central mast mount
-----------------	--------------------
