

Multi-Fiber Optical Cable

This multi-fiber optical cable is engineered for high-speed data transmission. Its construction includes a protective outer jacket and a reinforced layer to protect the delicate fibers.

Product Overview

High-Performance Multi-Fiber Optical Cable

This multi-fiber optical cable is engineered for high-speed data transmission in demanding networking environments. Designed with a durable yellow outer jacket, it is optimized for indoor installations such as data centers and telecommunications infrastructure. The robust construction includes an internal reinforced layer that provides essential structural support and protection for the delicate optical fibers within.

Technical Specifications

Jacket Color	Yellow
Recommended Use	Indoor, Telecommunications, Data Centers, Networking Infrastructure
Core Type	Multi-fiber

Construction

Protection Layer
Reinforced Layer • Metallic Structural Support
