

Multi-Fiber Optical Communication Cable

This communication cable is designed for high-speed data transmission. It incorporates a protective outer jacket, a Kevlar layer for strength, and an inner ribbon containing multiple optical fibers, making it suitable for diverse communication applications.

Overview

High-Performance Multi-Fiber Communication

This multi-fiber optical communication cable is engineered for high-speed data transmission across various professional communication applications. It features a robust construction including a durable outer jacket and a dedicated Kevlar layer for superior strength and protection. The internal ribbon design organizes multiple optical fibers efficiently, ensuring reliable performance in demanding network environments.

Technical Construction

Cable Layers

- Protective Outer Jacket
- Kevlar Strength Member Layer
- Inner Optical Fiber Ribbon

Fiber Arrangement

Multi-fiber ribbon configuration

Performance & Application

Primary Application

High-Speed Data Transmission • Telecommunications • Network Infrastructure

Key Features

Kevlar Reinforced, Multi-Fiber, High Durability
