

Multi-Interface Video and Audio Capture Device

This device captures video and audio from multiple interfaces, including composite and component video. It converts analog signals to digital formats and includes RS232 and LAN connectivity.

Product Overview

Professional Video & Audio Capture Solution

This multi-interface capture device is engineered for seamless conversion of analog video and audio signals into high-quality digital formats. It supports a diverse range of input standards including CVBS and YPbPr component video, making it compatible with various legacy equipment. With integrated RS232 and LAN connectivity, it offers robust control and networking capabilities for professional AV environments.

Connectivity & Interfaces

Audio Input Types

- Audio L (Left)
- Audio R (Right)

Control & Network Ports

RS232 • LAN

Video Input Types

CVBS, YPbPr Component

Power Specifications

Power Input

12 V

Voltage

Power Type

DC

System Compatibility

USB Connectivity

Yes
